## What do we mean by Search Engine?

It is a complex software program that designed to search an information on the world wide web and provide the best results in fastest way.

To show information search engine do a lot of background work. So that when you click on search button, you are presented with a set of precise and quality results that answers your questions and queries.

That background work is divided in 3 main stages: -

- Crawling
- Indexing
- Ranking

## LET'S UNDERSTAND

# What is Crawling?

Crawler is a software program that are responsible for finding information that is publically available on the internet.

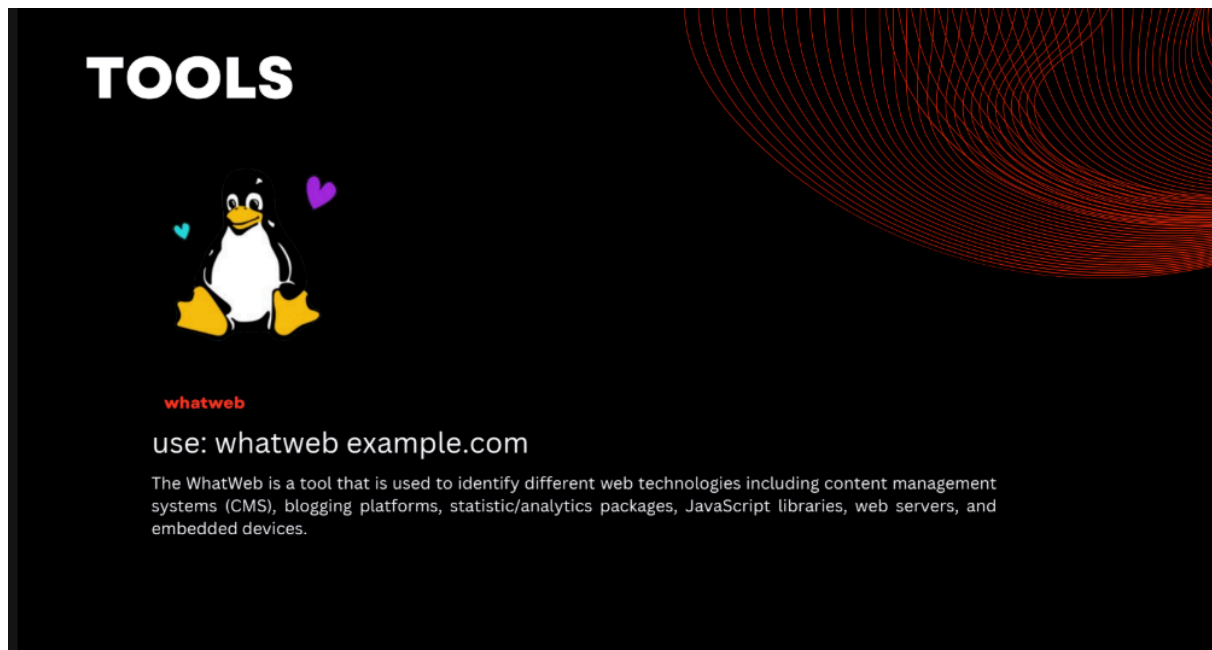

These programs scans the web and create a list of all websites.

They visit each page of the website & scan the whole HTML code and then try to understand: -

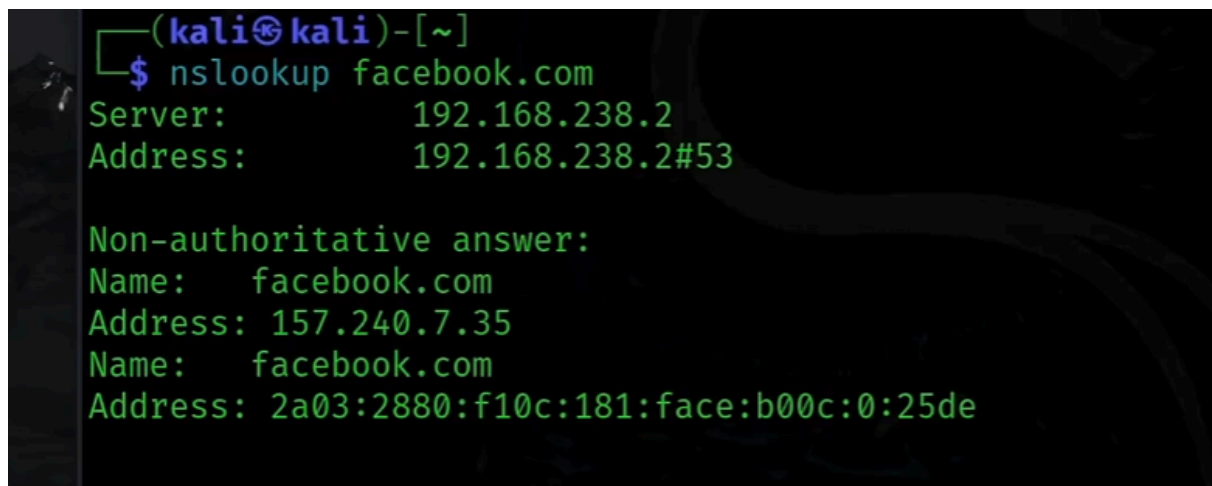

- Structure of a webpage
- Types of content
- Meaning of content
- When it was created and updated

# Burner Profiles

- Create a burner email account, consider gmx.com because it does not require another email to verify
- Create burner social media accounts using the fake email. Facebook is sneaky and will want to verify your info with a phone number.
  - Log out of VM and sign into public wifi.
  - Log directly into facebook mobile (m.facebook.com)
- Create burner phone numbers with VOIP or google voice
